

Adder @ NAB Show 2019

Adder showcases yet another world first alongside a wide range of award winning KVM innovations.

NEW: 4K IP KVM Debuts at NAB 2019

Following the launch of its extremely successful Zero U™ IP KVM transmitter last year, Adder is proud to return to NAB Show to debut another world first with the ADDERLink™ INFINITY 4000 Series (ALIF4000). Delivering dual-head, high performance 4K IP KVM, audio and USB over a single fiber connection, the ALIF4000 enables users to take control of all their 4K KVM requirements.

The launch of the ALIF4000 is perfectly timed to support IP KVM users as they transition their broadcast and production environments to 4K.

High Performance 4K IP KVM in Broadcast

Adder's range of high performance IP KVM solutions provide broadcasters and editors with real-time access to vital computing resources, anywhere on the network, from an individual workstation – improving flexibility and efficiency in busy live broadcast or post-production environments.

Now supporting 4K workflows, our solutions enable multiple TV galleries, radio studios, edit suites or OB trucks to be connected to a single, campus-wide KVM matrix.

From pixel-perfect video for post-production, to silent operation required for radio production, Adder's IP KVM solutions provide a unified system for the world's leading broadcasters.

"The launch of the ALIF4000 series gives us the opportunity to take control and add 4K functionality to our existing infrastructure, as and when we need it, without having to rip and replace; meaning we can continue to meet our customers' growing need for 4K output."

John Stevens
director of engineering, The Foundation

Secure, Real-Time Remote Access to HD Video from Anywhere in the World

The new ADDERLink ipeps+ boasts significant technological developments to the ipeps range, and brings enhanced remote access functionality to all industries where security and video quality are business-critical.

Adder has developed the ipeps+ to provide smooth-motion video at up to 30fps together with 24-bit color depth over IP. This versatile addition to the Adder portfolio enables organizations to securely view and edit HD video from anywhere in the world as if they were locally connected to the target computer.

"The adoption rate of KVM-over-IP is forecasted to skyrocket over the next five years, and we have seen a significant increase in customers demanding the ability to securely access servers or computers from anywhere in the world, across a WAN, with an 'at desk experience'."

Johnny Chuang
vice president, Accordance
(Adder channel partner)

Adder @ NAB Show - Quick View

ADDERLink INFINITY 4000

- Dual-head 4K60, audio and USB over single fiber
- Pixel-perfect / color accurate
- Fast switching / USB2.0
- Backwards compatible with ALIF range
- Simple to install / easy to use
- Migrate to 4K without a need to rip and replace

ADDERLink ipeps+

- Secure, remote access, anywhere
- HD 30fps with 24bit color depth
- Real-time, precise mouse sync
- Highly secure
- Multiple access
- Ergonomic and efficient

ADDERLink INFINITY 100T

- Zero U form factor
- Use your existing network
- USB powered / low consumption
- Supports multiple video resolutions
- Easy retrofit into existing infrastructure
- Plug and play

ADDERView DDX

- Direct connect matrix
- Intuitive, user friendly interface
- Enhanced ergonomics
- Touch screen functionality
- Lossless HD video / multi-head support

ADDERLink XDIP

- Compact matrix solution
- Ultra-low latency
- HD video / stereo audio
- Suited for small to medium matrix environments
- Connect and go
- Decentralized and self-managed

Adder CCS Pro

- Command and Control switch
- Control up to 8 computers
- Simultaneous access to video / audio
- Free-Flow technology

About Adder

A global market leader in connectivity solutions, Adder Technology enables the real-time control and management of distributed IT systems. With a presence in over 60 countries, Adder works with a network of distributors, resellers and OEMs to connect millions of devices worldwide. Adder is a thought leader and continues to deliver excellence through innovation.

Take Back Your Rack with Zero U™ IP KVM

When High Performance and Size Matters

With growing worldwide success, the ADDERLink INFINITY 100T (ALIF 100T) Series delivers the high performance IP KVM you expect from Adder with your choice of connectivity: DVI, display port or VGA. This space saving transmitter is ideal for small server rooms or compact production environments and seamlessly integrates with the rest of the ADDERLink INFINITY range.

"Our latest OB trucks are the world's first full-scale implementation of data over IP. In an environment where space is a premium it's essential that mission critical equipment can work in a full IP infrastructure. We look for world class technology and Adder's ALIF100T Series ensure the seamless, high performance experience we've come to expect."
