Adder Technology Ltd. Conflict Minerals Compliance Statement

Section 1502 of the Dodd-Frank Act in the USA requires publicly traded corporations to report the use of conflict minerals in the manufacture of their products. The term "conflict minerals" refers to tantalum, tin, tungsten, and gold (3GT). It has been determined that the mining or smelting of these minerals in the Democratic Republic of the Congo (the "DRC") and adjoining countries supports armed conflict and human rights abuses.

Since the introduction of this reporting requirement, Cobalt and Mica have their own extended reporting requirements.

Since the "DRC" was identified as the first conflict country, other areas of the globe and countries have been identified as producing conflict minerals.

Adder Technology Ltd, as a privately held non-US company, is not subject to the conflict minerals rules and reporting requirements, however we understand that some of our customers may be subject to them, so we remain committed to helping our customers comply with their reporting requirements.

We regularly survey our key suppliers utilising the latest version of the RMI CMRT for 3GT, and RMI EMTR for Cobalt & Mica to ascertain their use of these conflict minerals in the materials they supply to us. To the best of our knowledge and based upon responses so far, our products do not contain conflict minerals that were mined or smelted in the DRC or adjoining countries.

We will continue to gather responses from our key suppliers to ensure that the representations made in this compliance statement remain accurate. We reserve the right to amend this statement at any time based on subsequent developments or information.

If you have any questions or concerns regarding this statement, please do not hesitate to contact us.
